71st Year of the Albany Seed Store.

....TO CUSTOMERS.....

WING to the unfavorable conditions of last season, the excessive rains in the spring and the extreme hot weather in July, all varieties of seeds are very scarce, especially Peas and Squash, these are almost a failure. Radish, Carrot, Vine Seeds and Potatoes were not half a crop; on these varieties the prices are higher, but considering the scarcity and quality, very low, therefore, it will be well to order early as prices are liable to advance. The seeds I offer are of the very best sorts and strains to be obtained. I use the greatest care to keep the stocks first-class in every way, and can confidentially assert that none better can be had.

I thank you all for your patronage during the past 34 years and trust I will have a continuance of the same this season.

How to Order.—In writing out your order, do it as plainly as possible, and be sure to sign your name distinctly, giving post-office address, county and State, in full, and also express office, for many times it is better to send by express than by mail. Each year we have orders we cannot fill because they are unsigned. Make your order out as soon as possible. It will be an advantage to you and a favor to us.

How to Remit.—Send money by post-office or express money order, registered letter or draft. We guarantee the safe arrival of money sent in this way. Postage stamps received as cash when

notes are not obtainable, or to make proper change. (Two-cent stamps preferred.)

We Pay the Postage to all parts of the United States on the seeds mentioned in this Catalogue in packets, ounces and pounds, without adding anything to the list price, except where specially noted.

Remember, the Mail and Express bring Our Store to Your Door.

It costs no more to buy of us from a distance than if you came into our store and purchased seed over our counter.

Please observe that though we prepay the postage on seeds, as above stated, we make no addition to our Catalogue price to cover this outlay. Peas, Beans, Sweet and Field Corn, when ordered by mail, five cents per pint and ten cents per quart must be added to the price list for one-half the postage, and for Onion Sets eight cents per quart, and for Bird Seed fourteen cents

We fill Orders Promptly.—We aim to fill orders and dispatch them immediately after receipt, unless some special cause prevents, in which case acknowledgment is made and explanation given. Where no shipping instructions are given, we send by the best route we know of. Packages too large to send by mail we shall send either by express or freight. We fill an order for ten cents' worth of seed with the same promptness and care as one for fifty dollars. We guarantee the safe arrival of all packages.

We Test.—All our seeds are thoroughly tested before we sell them, in a most careful manner, and only those that grow well do we send out. This, in connection with our system of having to do only with the best stocks and carefully watching the crops, affords ourselves and customers the

best protection possible.

My long experience for the past 34 years in the growing, selecting and improving of stocks

enables me to supply customers with seeds that cannot be surpassed.

We do not warrant seed, because, as is well known, so many causes may, and often do, prevent the best seeds from growing and producing crops, from no fault in the seeds. We, therefore, in common with all other reliable seedmen, wish it distinctly understood that, while we exercise very great care to have all seed pure and reliable, we sell no seeds with warranty, express or implied, in any respect, and will not be in any way responsible for the crop. If the purchaser does not accept the seeds on these terms they must be returned at once, and the money that has been paid for the same will be refunded.

Novelties in Flower Seeds and Vegetable Seeds of Merit

Aster Surprise, Sunlight. Produced from Aster of French origin and claimed to be the first really Yellow Aster. Flowers are the same shape as the Jewel class and useful both for bedding and bouquets. Per packet, 25 cents.

Bellis Perennis, Delicata fl. pl. Very double flowers of a reddish white with light purple center. A new and delicate coloring. Per packet, 20 cents.

Celosia Spicata (Argentea linearis). A native of India making a beautiful plant, growing in an erect pyramidal form, throwing up a main stem about 2½ feet high bearing 20 to 30 side shoots with fresh green leaves, each of which is crowned by a cylindrical flower spike 2½ to 4 inches long. The flowers are of a bright rose tint, the lower part changing gradually to a silvery white making a charming combination of color The flowers preserve their beauty for a long time, continuing in bloom until late in the season. Per packet, 25 cents.

Cuphea Miniata, Alba. A pretty white blooming variety of Cuphea Miniata, of dwarf habit, easy to cultivate either as a border or pot plant, flowering profusely until late in the Autumn. Per packet, 20 cents.

Dianthus Chinensis Violaceus. Bushy plants, producing a slightly fringed single flower of a brilliant violet, quite a new color in Indian Pinks. Per packet, 20 cents.

Pansy, Orchid-Flowered. A new class, bearing flowers of a peculiar form, resembling certain Orchids. The upper petals are long, upright and prettily grooved and wrinkled. The coloring is rich and varied including many orange and terra cotta shades adorned with large brown or golden yellow blotches and stripes. Per packet, 30 cents.

Phlox Drummondi, Nana Compacta Isabellina. Of even dwarf growth, producing large flowers of pure yellow, a color not yet represented in the dwarf class. Per packet, 25 cents.

Pansy Masterpiece. A new class of blotched Pansies, with large flowers, undulated and curled, fine, rich colors. Per packet, 15 cents.

Giant Flowering Sweet Sultans. Flowers growing from 2 to 4 inches in diameter of graceful form and sweet-scented. Margarieta, snow white; Chameleon, pale yellow turning to lilac. Per packet, 10 cents.

Coleus. Large-leaved, finest mixed, foliage superbly variegated. Per packet, 20 cents.

Aster, Ostrich Plume. The plants grow from 15 to 18 inches high and are of a strong, luxurious branching habit. The flowers measuring 4 to 5 inches in diameter, are borne on long stems. The petals are long, wavy and so tinted as to give an extremely fine effect after the style of the comet. In color it is a fine white, changing to rose. Per packet, 20 cents.

Salvia Splendens, Silver Spot. The intense scarlet flowers of this type make a striking contrast to the soft, dark-green foliage which is liberally sprinkled with light sulphur or cream-colored spots of various sizes. Per packet, 25 cents.

Dianthus Heddewegii Nobilis. A new race of Indian Pinks, distinct by its dark foliage and long, stiff flower stalks which make it fine for cutting purposes. The blooms are large and lacinated, mostly of a brilliant, dark, blood-red color, carmine and rose. Per packet, 20 cents.

Semple's Late-Flowering Branching Aster. Superior to any other class of late-flowering branching Asters. The flowers are large, 4 inches across, very double, of purest colors, and borne on long stems. Begin blooming about the first of September and continue until frost; grow about 18 inches to 2 feet high. Mixed colors, per packet, 10 cents.

Morning Glory—Imperial Japanese. A class of Morning Glories from Japan. The flowers are of exclusive beauty in form and coloring, and of enormous size, often 5 or 6 inches in diameter; are easily cultivated, and grow rapidly about 30 feet high; colors vary from white, rose, crimson, carmine, blue and purple, some being mottled, striped, penciled and bordered in great diversity; foliage is often prettily variegated. Per packet, 10 cents.

Price's New 1900 Sweet Corn. It has a very large ear set well down on the stalk, which is of medium height, stout and strong. The kernel is large, plump, white, sweet and tender. It is very early and a first-class family or market variety. Per packet, 10 cents; per quart, 25 cents.

Jones' Stringless White Wax Beans. A splendid new variety obtained by crossing the Yosemite with the Ivory Pod Wax Bean. The pods are perfectly round, very solid, of a delicate light-yellow color, and perfectly stringless and brittle. The vines are dwarf and stocky, very vigorous in growth, rust-proof and extremely productive. Per packet, io cents; per quart, 25 cents.

Potato, Dunham's Surprise. A new valuable early variety, both for market or family use. It is of vigorous growth, producing large, strong tops very early in the season, which shade the ground and help prevent injury from drouth. It has a white russet skin, flesh white and cooks floury, being a fine eater even when half grown. It is very early, very prolific and of large, uniform size. Per peck, \$1.00; per bush., \$3.00.

Price's Danish Beauty Cauliflower. A large, solid, white headed variety; sure to head and early. Per packet, 25 cents; per ounce, \$5.00.

Price's American Breakfast Muskmelon. A fine, new sort, with thick golden-yellow flesh; good-sized, fine-flavored, finely netted skin; a fine sort and worth a trial. Per packet, 10 cents; per ounce, 15 cents.

Early Market Cabbage. An extra early variety, forming a good head early in the season. Per packet, 5 cents; per ounce, 35 cents.

Heat-Resisting Lettuce. A good summer variety, standing the heat well. Per packet, 5 cents; oz. 20 cents,

Price's Albany Market Radish. Of a beautiful rose color, running into white half-way down; good-sized, medium long. Per packet, 5 cents; per ounce, 10 cents.

Paul Rose Muskmelon. This fine, new red-fleshed melon is very sweet and high-flavored, combining the good qualities of the netted Gem and Osage, from which it originated. Skin finely netted, flesh red and very thick; finegrained with small seed cavity. Per packet, 5 cents; per ounce, 15 cents.

Price & Reed's Long-Keeping Celery. It has large, solid stalks of fine texture, crisp, brittle and tender, a very fine keeper, remaining in good condition longer than most any other sort. Per packet, 5 cents; per ounce, 35 cents.

VEGETABLE SEEDS.

ARTICHOKE.

CULTURE. The seed should be planted about the beginning of May, in open ground, highly enriched with plenty of well-rotted cow manure, and kept clear of weeds. Water frequently if the weather is dry. Seedlings should be set in rows 3 feet apart each way.

Pr pkt Pr oz .. \$0 10 \$0 30 Green Globe

ASPARAGUS.

ASPARAGUS.

Sow the seed in the Spring as early as the ground will permit, in rows 1 foot apart. Soak the seed twenty-four hours in warm water. Cover about 1½ inches, and press the earth down by treading or rolling, Carefully hoe and keep free from weeds. When two years old transplant to permanent beds, no base being required. Plow or dig the ground 9 or 10 inches deep. Set in rows 12 inches apart and 15 inches between the rows. Top-dress the bed with 3 inches of old, well-rotten, pulverized manure. Every Autumn the stalks should be rolled down, and in the Spring top-dressed with old, rotten manure, and sprinkle the bed well with salt. Never use a fork on the bed, as it injures the crown. Should not be cut until the plants are three years old, and then as near the surface as possible.

STOCK BEETS.

A Reduction in Prices Made for Large Quantities.

In view of the sugar industry, now proved to be a success in New York State, we list the four following varieties of Sugar Beets, which the department at Washington and New York State experimental station have decided are the best kinds adapted for producing sugar in this locality.

F	KLEIN WANZELBEN. A variey which is	used
	extensively in Germany and France. It contains a	good
	percentage of sugar and will do better on poorer	soils
	than the other varieties, being a little hardier and gro	wing
	to a good size	

	, .				
1	LANE'S	IMPERIAL	WHITE	SUGAR.	An
		variety, grows to			
i	for stock,	has a large perce	ntage of suga	r	

Vilmorin's Imperial Sugar. Prolific, retains its sugar a long time

White Sugar. Exclusively grown for sugar and excellent for stock.....

Long Red Mangel Wurzel. A large, long variety; grows well out of ground

Carter's Mammoth Long Red Mangel Wurzel. This is a fine stock of Long Red, grows to an immense size, of very fine texture

NORBITON'S GIANT LONG RED MANGEL WURZEL. Excellent, growing well out of ground, with a small top, very large, of fine grain and an enormous yielder. This is the best long variety and the one to sow.

GOLDEN TANKARD MANGEL WURZEL. A valuable variety, of fine form and sweet flavor; color, a bright yellow

Yellow Globe Mangel Wurzel. Roots of large size and of globular form.....

Warden's Orange Globe Mangel Wurzel. A dark yellow globe of large size, very productive.....

Red Globe Mangel Wurzel.....

CARROT.

Sow as early in the Spring as the ground can be worked, in a rich light soil, well manured with old fine manure and thoroughly worked very deep. Fresh stable manure is likely to make them fork and branch. Land that was heavily manured the previous season is the best. Plant in rows fourteen inches apart in the garden, but from twenty to twentytwo inches in the field, and thin plants to five or six inches in the rows, hoeing often between them, just enough to kill the weeds, otherwise the roots tend to branch or fork. For general crops sow during May.

Packets of each variety, 5 cents.

P. & K. LARGE BRISTOL CABBAGE.

CABBAGE.

Early varieties should be sown in hot-beds during February and March, transplanted into very richly manured ground about the middle of April. The ground should be loosened and worked up thoroughly to grow large and good heads. Hoe often to kill weeds, and draw earth up o the stems. For later crops sow in shallow drills (four to six inches apart), in April or May. To keep off the "fly," soot, wood ashes, lime and tobacco dust, or any or all, should be used freely, very early in the morning; one day's neglect may spoil the plants. Set during the month of June, in rich ground three feet apart.

Packets of each variety, 5 cents. Pr oz Pr lb Early Jersey Wakefield. (True). Very early; fine cone-shaped \$0 30 \$3 50 Large Jersey Wakefield. A large strain of Wakefield, but a little later.... 30 3 50 HENDERSON'S EARLY SUMMER. (True).
Very early; heads solid and compact; fine early variety... 25 2 50 Winningstadt. (Cone-shaped). Second early..... 20 2 00 Fottler's Brunswick. Early, large and compact; a standard Summer and Fall variety 20 2 50 PRICE & REED'S PREMIUM DRUMHEAD.

A large, fine, round-heading variety, with firm, solid, compact heads of the finest quality. It gives a larger proportion of perfect heads than any other variety; one of the best large sorts . 30 3 50 the Flat Dutch, in color much darker; very sure to head; growing to a large size and compactly, an excellent keeper. It is grown almost exclusively in this vicinity on account of its shipping qualities. Growers should try this...... 30 3 50 DANISH BALL HEAD. Hard, solid, round heads; a good marketable size, fine grained and a fine keeper; carrying well until early spring.... 30 3 00 Newark Early Flat Dutch. An early Summer variety; heads large and compact UCCESSION (Henderson's). Produces heads about a week later than the Early Summer, but double their size and sure heading qualities..... 25 3 00 SURE HEAD. Produces heads resembling Flat Dutch; uniform shape, hard, firm and of fine texture; has few loose leaves. Sure to head, keeps well and is good for 25 2 75 25 3 00

OXHEART CARROTS.

CAULIFLOWER.

Should be sown in hot-beds in February, transplanted into another frame in the latter part of March, and in May planted out in rows 3 feet apart, 2 feet between plants. Any good cabbage soil will grow cauliflower, as their requirements are almost similar. If the weather is dry, water freely. The large leaves should be broken down over the flower head as they appear, to keep the sun and rain from injuring them.

EXTRA EARLY SELECTED DWARF ER-FURT. Finest strain. The earliest of all; very sure to head; dwarf growing, large, white compact head, the best early variety 25 5 00 Extra Early Dwarf Erfurt. Fine popular strain... Early Dwarf Erfurt. Good heading qualities...... SNOWBALL. (Selected.) A very early variety, with firm, white heads and good heading qualities..... 20 3 00

NONPAREIL. fine; late; good for general crops

CELERY.

HORN

Should be sown very early in the spring, in open ground or in the hotbed. When 3 inches high, transplant 4 inches apart into a rich, finely pulverized soil. If the weather is dry, press the earth well around the roots. Water and protect till well rooted; shear off tops once or twice to make them stocky, then transplant into rows 3 or 5 feet apart, in well manured shallow trenches, or on the surface, setting the plants 6 inches apart. To blanch, draw the earth around the plants.

Packets of each variety, 5 cents.	Pr oz	Pr lh
Selected White Plume. A half dwarf variety, very crisp, tender. Inner leaves and heart white. To blanch, close the stalks and draw the soil up, using great care not to get the earth in the center or heart of the stalk, as it will tend to keep it from making a perfect head. It should not be handled when wet with dew or rain, as it will cause it to rust. It is a fine variety for early use, as it stands the heat of Summer better than most sorts.	\$0 25	
golden self-bleaching. Is of dwarf, compact growth, with very stocky, vigorous, straight stalks. The ribs are solid, crisp, tender and of good flavor. It is a strong grower, and like the White Plume, requires very little labor to blanch. With hardly any banking or covering up, the outer ribs become a yellowish white and the center a rich, golden yellow. It is also a good keeper		5 00
PRICE & REED'S LONG KEEPING. Has large, solid stalk, of fine texture, crisp, brittle and tender, and is a fine keeper, remaining in good condition longer than any sorts		4 50
DWARF WHITE GOLDEN HEART. A half-dwarf variety; when bleached the heart is large and full; of a golden, waxy yellow; early, solid and of fine flavor, a splendid keeper; a good Winter sort	25	3 00
PERFECTION HEARTWELL. A fine, large Winter variety, heart of golden yellow, and of superior quality.	25	2 50
Giant Pascal. A selection from Golden Self-Bleaching, but much larger and a better keeper; height, 2 feet; stalks broad, crisp, thick and stringless; easily bleached	20	2 50
Broad Ribbed Kalamazoo. A half-dwarf variety, attaining a large size, stiff and close habit, solid and fine flavored, ribs very broad, thickly and closely set; a good keeper	20	2 50
Schumacher. Large, safe, solid and crisp; golden yellow heart	25	3 00
Crawford's Half Dwarf. Of medium growth, very large heart; solid, crisp; of fine flavor	25 25	2 50 2 50

CELERY PLANTS.

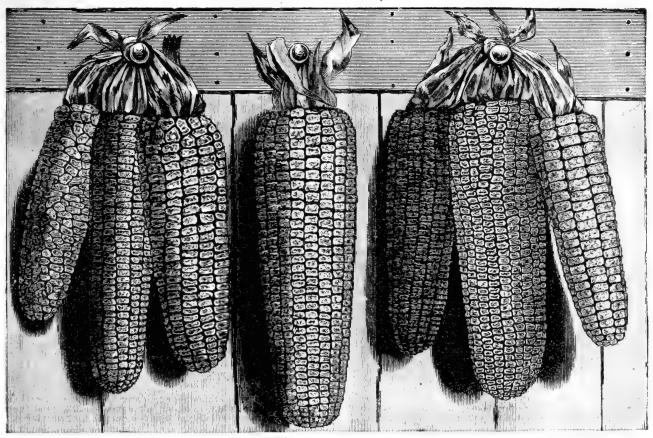

(See Vegetable Plants, Page 23.)

GOLDEN HEART. LONG KEEPING. GOLDEN SELF BLEACHING.

Parties growing celery for their own use will generally find it more satisfactory to buy the plants, which we always have in large quantities through July and August.

Plant about the middle of May or as soon as the ground is dry (if planted too early, corn is apt to rot; the late varieties are more liable to rot than the early ones), in hills 3 feet apart each way; 7 or 8 kernels in a hill; hoe often and draw up the soil to the stems; thin to 4 stalks and break off side shoots. Use plenty of old, fine manure. For succession, plant every 2 or 3 weeks until the last of July.

Packets of each variety, 10 cents. Pints 10, and 13 cents. By mail add 10 cents per quart for Postage

For Pickles \$0.05 \\$0.25

MUSHROOM BED.

MUSHROOMS.

Mushrooms may be grown in a cellar or shed, or in beds prepared in the open air, in the same manner as hot-beds. Take fresh horse droppings and mix with about the same weight of loam. Turn and mix every day until the required amount is obtained. When the heap has cooled off to about 90 or 95 degrees make the beds 4 feet wide and 8 inches deep, each layer firmly trodden down. When the temperature has fallen to about 90 degrees put in the spawn, in pieces about the size of a hen's egg, 2 inches deep and 12 inches apart each way; in 10 or 12 days cover with 2 inches of loam and beat firmly down with the spade; cover this with 3 or 4 inches of hay or straw. The temperature should be as nearly uniform as possible, but should range only between the extremes of 50 and 70 degrees. They will appear in from 4 to 6 weeks.

English (in bricks), per lb., 15c; by mail, 25c.

DWARF OKRA.

ONIONS.

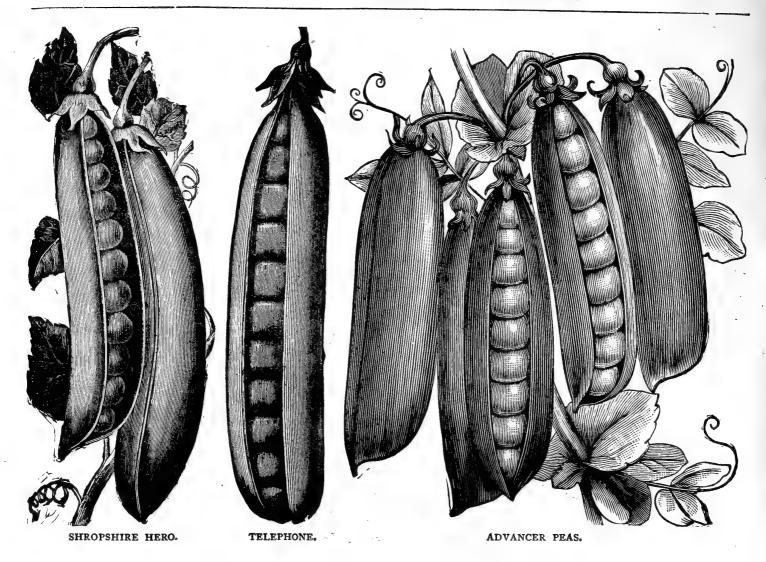

Ontons should be sown thinly in drills, 1 inch deep and 12 to 16 inches apart, in a rich, loamy soil, deeply dug and lightly rolled. It is better to have land that has been used for hoed crops for a year or two, and has been well manured. If the requisite amount of manure is put on all at once it is apt to make the bulbs soft. If manured gradually the land cannot be made too rich. The manure, however, should not be rank, but should be well fermented. Ground bone or superphosphate may be used, but if they are, they should be well applied, partly when the crop is sown and partly as the bulbs begin to form. It is advisable to use a seed drill in planting, first testing the regulator upon a floor to see if it allows the seeds to pass out in proper proportion. From 4 to 6 pounds to the acre is usually sown. If the drill used has no roller, a hand roller should be passed over the ground immediately after sowing. As soon as the onions are up so that the rows can be seen, they should have the first hoeing, just skimming the ground between the rows. After a few days they should be hoed close up to the plants and weeded. This must be done thoroughly. In about two weeks another hoeing and weeding should be given, and in two weeks more still another.

Price & Reed's Improved Strain of Yellow Globe Danvers Onion. Is the Finest Strain in Cultivation.

PEAS.

Northern Grown, all Hand Picked.

Plant as early as the ground can be worked, in single or double rows from 3 to 4 feet apart, about an inch apart in the row and 3 inches deep. (In summer they should be planted 6 inches deep.) Hoe often. They will mature early in a light, dry soil, especially if manured the previous season, but should not be manured too highly at the time of planting. If they grow too fast, and show no signs of bloom, run a spade down on each side, about 6 inches from the row, and thus root prune them, which will cause them to bloom in a few days. For a succession, plant every two weeks during the season. For early peas the soil should be light, warm and sheltered, but for general crop a moderately heavy soil is better.

By mail, add 10 cents per quart, 5 cents per pint. See page 2.

* Wrinkled varieties, the best and sweetest, should be planted much thicker, being liable to rot.

Large packets of each variety, 10 cents; where quarts are quoted, 20 cents; pints are 13 cents; quarts, 15 cents; pints, 10 cents.

SQUASH PEPPER.

WHITE NORFOLK TURNIP-

POTATOES

Good Seed Potatoes are season, and liable to adare prices vance.

The potatoes I offer this season were specially grown for seed in the north of Michigan, on new ground and are entirely free from rot, scab and all disease. They are true to name, clean and smooth; the very best for seed. Potatoes grown in this section last season were not successful crops, owing to the dry, unfavorable weather. New seed stock, such as we offer, will this year be more desirable and advantageous to use than ever before. The potatoes I offer this season. to use than ever before.

They will insure earlier and better-

They will insure earlier and bettersized crops than could be had by
using any potatoes grown about here.
The prices I quote are low considering the very fine stock I offer.
I recommend that those of my
customers who want new seed
potatoes send me their orders early,
as my stocks are limited and cannot
be repletished be replenished.

I have listed a few varieties. These are the newest and leading sorts of the many kinds of potatoes now claiming public attention. The prices are liable to variation as the season are hable to variation as the season advances, and our stocks become exhausted. Of late years, great attention has been paid to the improvement of existing sorts of potatoes and the introduction of new kinds. There is no more economical potate kinds. kinds. There is no more economical investment than the money paid out for improved varieties. Changing your seed will be sure to improve your crop and bring much better quality and heavier yield. In this way you will be repaid a hundred fold. The prices at which I have listed my potatoes are low for this season, and

I can recommend them as being true to name, northern grown, from carefully selected first-class stocks.

Single pounds sent by mail for 30 cents per pound, or 4 pounds for \$1.00. Barrels contain 165 lbs. of

DUNHAM'S NEW SURPRISE. A valuable extra early variety, both for market gardeners' or family use. Has all the qualities desirable for a first-class early potato. Its growth is very vigorous, producing large, strong tops very early in the season, which shade the ground and help to prevent injury from drouth. Has a white russet skin with a very white floury flesh. A fine cooker even when half grown. Its earliness ranks No. 1 and is a first-class cropper; tubers large and uniform. Per peck, \$1.00; per bushel, \$3.00.

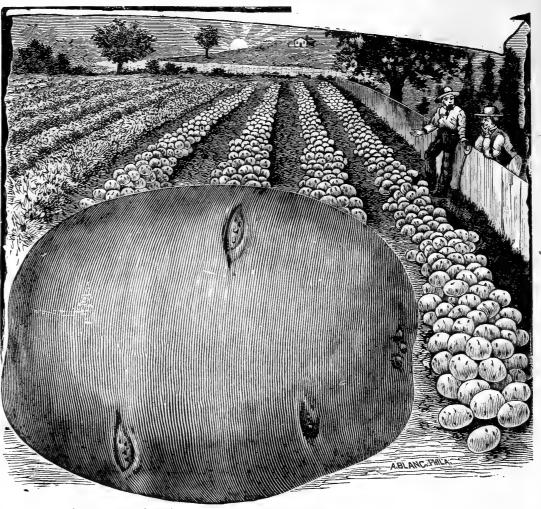

PRICE & KNICKERBOCKER'S EARLY SUNRISE POTATOES. The earliest of all. Introduced by us in 1876, and still holds its own. Has given more universal satisfaction than any sort ever offered since the Early Rose. Planted with all the earliest kinds, it was ripe in advance of any, producing potatoes fit for the table in fifty days from the time of planting. The tubers are oblong, large, solid, uniform and handsome, flesh white, fine grained and dry, cooking well, even when first dug; very productive and of fine keeping qualities; vines dark green; good strong growers. It has yielded at the rate of 550 bushels to the acre. Per peck, 75 cents; per bushel, \$2.50; per barrel, \$5.00.

BOVEE. Fine new variety, tubers of oval shape, growing large and compactly in the hill; flesh fine grained, dry and white. It is very early, and a large yielder. Per peck. 75 cents; per bushel, \$2.50; per barrel, \$5.00.

IRISH COBBLER. An extra early variety, ripens evenly and yields largely, skin smooth, white, with strong and healthy sprouts, flesh white and finest quality. Per peck, 75 cents; per bushel, \$2.50; per barrel. \$5.50.

EARLY MARKET. Extra early, and of fine quality. Tubers medium to large, light pink or flesh colored; resembles Ohio, and a good keeper and yielder; good for market. Per peck, 75 cents; per bushel, \$2.50; per barrel, \$5.50.

EARLY FORTUNE. Productive, early, of fine quality. In shape and color resembles the Early Rose. Per peck, 75 cents; per bushel, \$3.00; per barrel, \$6.00.

Barrels contain 165 lbs. Potatoes.

Honeoye Rose. A fine, early variety, originated from the old Early Rose and Victor Rose. It is very early. Tubers all large and good shape; color pale pink, reddish around eyes. Flesh fine, white as snow, and of fine flavor; excellent cooking quality. It is an enormous yielder. Per peck, 75 cents; per bushel, \$2.75; per barrel, \$5.50.

EARLY THOROUGHBRED. Tubers, oblong in shape, smooth, handsome, of a light blush color, a good cre Per peck, 75 cents; per bushel, \$2.50; per barrel, \$5.00. cropper, and early.

Sir Walter Raleigh. A fine, medium variety; flesh white, fine grained, and a good yielder; fine cooker. Per peck, 75 cents; per bushel. \$2.50; per barrel, \$4.75.

EARLY NORTHER. This fine, early variety, seems to do well on all soils, producing a large crop. The tubers grow to a large size, and have a handsome appearance. In shape and color, it resembles the Early Rose, from which it originated. Per peck, 75 cents; per bushel, \$2.50; per barrel, \$5.00,

Early Ohio. Oblong in shape, skin and flesh white, very early, and a good cooker. Per peck, 75 cents; per bushel, \$3.00; per barrel,

An early sort, with white flesh, and skin of ong. An excellent yielder. Per peck, 75 cents; NEW QUEEN. blush tinge, shape oblong. An exper bushel, \$2.25; per barrel, \$4.50.

Extra Early. (Burpees.) Very early, and productive, tubers of good size, very smooth, fine, uniform, oblong shape, growing very compactly in the hill, skin white, slightly shaded pink, flesh pure white, of very fine grain. Per peck, 75 cents; per bushel, \$2.25; per barrel, \$4,50.

EARLY 6 WEEKS. This potato is said to produce fair-sized tubers in six weeks from time of planting. It grows medium to large size, oblong to round shape; smooth, light flesh-colored skin, white flesh. Per peck, 75 cents; per bushel, \$2.50; per barrel, \$5.50.

Early Maine. Early, smooth and regular; first-class in every ay. Per peck, 75 cents; per bushel, \$2.50; per barrel, \$5.00.

Early Rose. A true stock of that fine old variety. Per peck, 75 cents; per bushel, \$2.50; per barrel, \$5.00.

Money Maker. A long, handsome, fine shaped, smooth, late, white variety. Eyes nearly even with surface; very fine grained, with good cooking qualities; a strong grower, and enormously large yielder. Per peck, 75 cents; per bushel, \$2.50; per barrel, \$4.75.

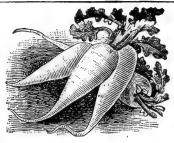

Carman No. 3 produces large, uniform, handsome tubers, slightly flattened, growing close to the plant. The skin and flesh extremely white, and its cooking qualities are excellent. It is a strong grower and an unusually large yielder; ripens among the later sorts. Per peck, 75 cents; per bushel, \$2.00; per barrel, \$4.25.

SCARLET TURNIP.

BOSTON MARROW SQUASH.

SQUASH.

Prepare the ground by thoroughly pulverizing it. Manure highly. All vines delight in warm and rich soil. Plant in hills nine to ten feet apart for running varieties, five to six feet for bush sort, working some fine, rich manure into each hill. Plant eight or ten seeds and when out of danger of bugs leave only two plants to the hill. Keep well covered with plaster or air-slacked lime in the early stages of growth. Cultivate till runners are well started.

Packets of each variety, 5 cents. Proz Prlb MAMMOTH WHITE BUSH. An improvement on the White Scollop Bush variety, growing double the size, ripens early, skin handsome, white and very productive...

EARLY WHITE SCOLLOP BUSH. A flat early, scolloped-shaped variety; rind smooth; use when young \$0 10 \$0 65

and tender. YELLOW SCOLLOP BUSH. Like the preceding, SUMMER GOLDEN CROOKNECK. Productive

GIANT SUMMER CROOKNECK. A very large variety of the Summer Crookneck, having a thick flesh and very few seeds. Prolific and of excellent flavor—

PIKE'S PEAK (The Sibley.) The shell is a pale green, very hard and flinty; flesh very thick, of a bright orange color; quality dry, of very fine grain and fine flavor, Ripens about the time of the Hubbard, but is more prolific. It keeps well into the Spring.

erfect Gem. Excellent for Summer and Winter; wonderfully productive; color creamy white, with a thin,
smooth skin; flesh very fine grained, sweet and dry, with

a delicious flavor

Furban, or Turk's Cap. Flesh orange yellow
thick, fine-grained and good flavor; a good Fall or Winter

ssex Hybrid or Hard Shell Turban. Flesh fine-grained, sweet, thick, rich-colored and fine flavored; large and productive butman. Color bright green, intermixed with white; flesh bright salmon color, dry, sweet and an excellent breener. Rutman.

keeper.

Marblehead. Flesh rather lighter-colored than Hubbard; thick and flat at top; very sweet and dry; a fine keeper and yielder.

HUBBARD. The standard late variety; large size; flesh fine, close-grained, dry and fine flavor; keeps splendidly

Warted Hubbard. Good quality.....

Red Hubbard. In shape and size resembling Hubbard but of rich orange red in color, and earlier.

BOSTON MARROW. Standard; color bright orange; flesh deep orange; fine flavored; a good keeper.

Mammoth Chili. Grows to an enormous size, often weighing 150 pounds; color light green.

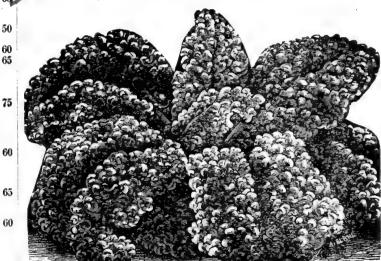

Vegetable Cream Marrow. A favorite English variety; skin greenish yellow; flesh soft white and fine-flavored

SALSIFY, or VEGETABLE OYSTER

Sow as early as the ground can be worked in the Spring, in a light, mellow soil, which should be stirred to a depth of eighteen inches; sow in drills twelve inches apart, one inch deep and thin out to four or five inches in a row. Keep clear from weeds. Cultivate the same as the parsnip.

Packets of each variety, 5 cents.

Pr oz Pr lb \$0 20 \$1 00

" SAVOY LEAVED SPINACH.

SPINACH.

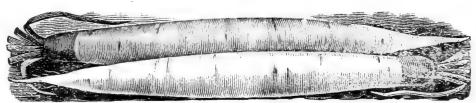

For Summer use sow early in the Spring, in deep, rich soil, well matured, in drills one foot apart, covering the seed one inch deep. For very early Spring use, sow in August, and protect the plants through the Winter with a covering of leaves or straw. For a succession, sow at intervals of two weeks.

Packets of each variety, 5 cents.

Special Prices on 10 Pounds and over-

65 Per oz Per lb SAVOY LEAVED. Leaves thick, large and fleshy; a fine market variety, producing nearly twice the weight of crop of ordinary sorts, and very hardy
ROUND LEAF. Leaves thick and fleshy, slightly crimped; preferred for Spring sowing.

WHITE STRAP LEAF, EARLY DUTCH-RED TOP STRAP LEAF TURNIP.

RUBY KING PEPPER.

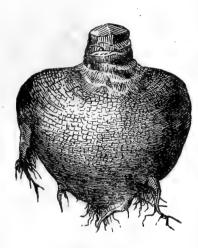

WHITE EGG TURNIP.

TURNIP.

For early use, sow as soon as the ground can be worked in the Spring, in drills fourteen inches apart, covering but slightly, except in dry weather. The soil should be light, and, if possible, new. Manure with plaster, ashes or phosphate. Thin the early varieties to six inches apart, and the Rutabagas to one foot. For Fall and Winter use the early kinds should be sown in July and August and Rutabagas through June. Hoe them a month after sowing.

SWEET GERMAN TURNIP.

Targe White Norfolk. Large size; skin white, sometimes greenish above ground, flesh sweet and close grained......

Cow Horn. A long carrot-shaped variety.....

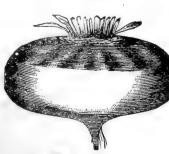

Sweet German. Flesh firm and sweet.....

BIRD SEEDS.

If you wish to keep your Birds in good condition and have them sing well, feed them good Bird Seed. We sell only the very best Sicily Canary, English or German Rape, German Millet and Russian Hemp. One trouble with the common Bird Seed sold in boxes in the stores, is that it contains common Smyrna Canary, oftentimes musty, which, of course, is injurious to your Birds. Our seed, mixed of the very best quality, costs less than that sold in boxes. We sell at 12 cents per quart or 6 cents per pint. The boxes you pay 10 cents for contain a pound; we sell a pint at 6 cents, which is nearly a pound; three pound packages would cost you 30 cents; three pints, which weigh 3 pounds lacking 2 ounces, would cost 18 cents, which is a saving of 12 cents, besides having the best quality. You are paying for the box and the fancy label on it; bear this in mind when you want Bird Seed.

Mixed Bird Seed. Mixed of Sicily Canary, German Rape, German Millet and a very little Russian Hemp; just enough to keep your birds in good condition. 12 cents per quart; 6 cents per pint.

Canary and Rape. 12 cents per quart; 6 cents per pint.

Clear Canary. The best Sicily. 12 cents per quart; 6 cents per pint

English or German Rape. 15 cents per quart; 8 cents per pint.

Hemp, best Russia. 15 cents per quart; 8 cents per pint.

Washed Silver Sand. 10 cents per quart; 5 cents per pint.

Gravel Paper. 25 cents per package.

Song Restorer. For restoring birds' song; also acts as a tonic for improving the plumage. Per bottle, 25 cents.

Bird Invigorator. A tonic for loss of feathers, hard breathing, asthma, and all diseases to which birds are liable. 25 cents per bottle.

MOCKING BIRD FOOD. For all soft bill birds, such as Mocking Birds, Thrushes, Robins, Nightingales, etc. Per bottle, 40 cents.

ROUGH RICE, per quart, 25 cents.

SUNFLOWER, per quart, 20 cents.

PARROT SEED, Rough Rice, Sunflower and Hemp, mixed, 20 cents per quart.

MAW, 5 cents per ounce.

Bird Lettuce, 10 cents per pound.

Cuttle Fish Bone, 5 cents each,

Cage Cups, all styles, Porcelain, Tin Top, Glass, etc.

Cage Guard, for putting around cages to prevent throwing the seeds on the floor.

Swings, Nests, Nesting, Perches, Cuttle Fish Bone, Cuttle Fish Holders, Cage Springs, etc. Telephone No. 968.

FERTILIZERS AND PLANT FOODS.

These Fertilizers, or Plant Foods are made expressly for Plants or flowers growing in the House, Garden or Conservatory, and contain the same Plant Food as stable manure, but in a cleaner, more concentrated and soluble form. The stable manure is disagreeable to handle, slow in effect, and often breeding vermin about the roots of the plants, and, like guano, has an unpleasant odor. The Plant Food has no unpleasant odor, is clean to handle, and being soluble, is immediately taken up by the plants, producing a quick and healthy growth, with more abundant blossoms, of a richer color, than any other dressing will produce. It gives a rich, green color to the leaves and prolongs the period of blooming. It cannot injure the plant, and protects it from vermin. It can be dissolved in water or worked into the earth, and the effect will be seen in a week or ten days after the first application.

Standard Fertilizers—Superphosphate for Field and all

Standard Fertilizers - Superphosphate for Field and all Garden Crops, 2% cents per lb. by bbl; \$38.00 per ton.

Plant Food for flower beds or plants in pots, put up in bags of 5 lbs., 50 cents; 10 lbs., 75 cents; 25 lbs., \$1.50.

Bowker's Plant Food — Packages sufficient for twenty plants for three months, 15 cents, and for one year, 30 cents.

Lawn Dressing in 5 lb. bag, 50 cents; 10 lb. bag, 75 cents; 25 lb. bag, \$1.25.

Plant Sticks, round, painted green, from 11/2 feet to 5 feet long.

Plant and Pot Labels from 4 to 6-inch. Price, see page 47.

FOR THE LAWN.

PRICE & REED'S FINE MIXED LAW. GRASS is composed of a mixture of the best varieties of fine swarding grasses, especially adapted for seeding down lawns, door-yards, centery lots, etc., in this climate. It makes a short top and strong root, and when grown produces a soft, compact, velvety turf. A beautiful lawn an only be had by using a good mixture of grasses. By using our mixture and cutting often, when grown, a beautiful green sward can be obtained. We have made this mixture a careful study, and it has given great satisfaction. Before sowing, the soil should be thoroughly prepared of digging and raking so as to completely pulverize it; all stones and roots should be removed and, if low, ought to be drained. Unless the ground is very rich, some fertilizer should be applied. Lawn Dressing or sheep manure is the best, as it helps the grass wonderfully to a quick, vigorous start and causes it to retain a bright green color. Sow the grass thickly and rake well in, not too deep, and roil if possible. With seed sown later than April or May, it is often well to sow a little oats, to protect it from the heat of the sun. With a little care a much finer grass plat can be obtained than by sodding.

TO MAKE BEAUTIFUL LAWNS USE LAWN DRESSING.

No Odor. No Lumps. No Weeds. Clean as Sugar to Handle. Inexpensive.

This Dressing is prepared for Lawns, Grass Plats and Cemetery Lots, and it is so compounded as to contain all the Plant Food required by the lawn grasses. Within a short time after application it will produce a luxuriant growth of grass of a rich green color, and will last during the entire season. It is odorless and the cost of applying is a mere trifle compared with the application of stable manure. It will not burn the flower Garden. A superior dressing for the lower Garden.

Discrepance Sow broadcast over the surface when the grass is dry. 5 lb. bag, 50 cents; 10 lb. bag, 75 cents; 25 lb. bag. sufficient for 2,500. sq. ft., \$1.25; 50 lb. bag, for 5,000 sq. ft., \$2.50; 100 lb. bag, for 1-4 acre. \$4.50.

PURE PULVERIZED SHEEP MANURE. Fine for Lawns, Door Yards, Flower or Vegetable Gardens. 25 lbs., \$1.00. Bag, about 100 lbs., \$2.50.

Fertilizer, Ground Bone, Sward Food, Lawn Enricher, Nitrate of Soda, Plant Food, Etc.

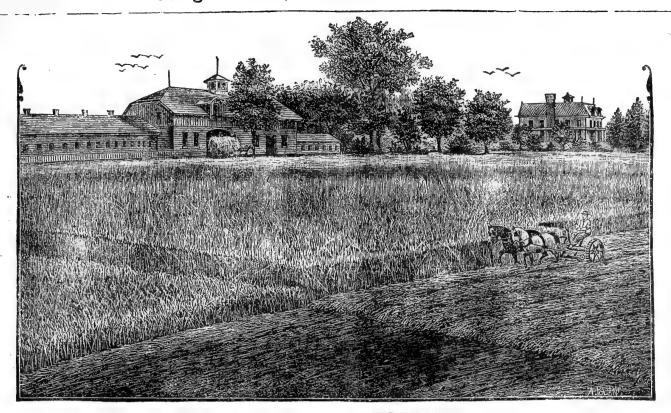

Price's Improved Lawn and Garden Rollers.

It is of great benefit to use a roller on the lawn, especially in the Spring, as the action of the frost causes the ground to heave and become uneven. If it is not firmly pressed back with a roller before hot weather the grass is apt to be injured or killed, leaving the lawn full of bare spots. These Rollers have weights attached to axle and have round edges.

GRASS SEEDS.

SUBJECT TO VARIATIONS IN PRICES TO CORRESPOND WITH THE MARKET.

Special quotations on large quantities will be given at any time. We call especial attention to our Grass Seeds, which are not to be confounded with the ordinary grades offered in the open market. They are selected with care, and are much more economical to use than the common qualities.

Add 5 cts. per qt., 8 cts. per. lb. on grass and clover when ordered by mail.

LAWN GRASS. (See page 24.)

RED TOP (Agrostis Vulgaris). Time of flowering, July; height, about 18 inches. A valuable permanent perennial grass, growing in almost any soil, moist or dry, but reaching its perfection in a moist, rich soil, and standing hot weather well. It is frequently sown in mixture with Timothy and Red Clover. Sown alone takes about 3 bu. to acre, about 10 lbs. to bu. Per qt. 25 cents; per bu., \$1.25; per 100 lbs., \$9.00

RED TOP, fancy, recleaned. Same as above, but cleaned from all chaff and impurities. Per lb. 25 cents; per 100 lbs. \$20.00.

FANCY EXTRA CLEAN, (FREE FROM CHAFF)

BLUE GRASS (Poa Pratensis), Kentucky, also known as June Grass, Green Grass, etc.; perennial, flowers in June; height, 10 to 15 inches. This is a valuable grass for pasture and suited to a variety of soils, from moderate dry to a moist meadow. It is very productive and of early growth in the spring, furnishing excellent food for all kinds of stock throughout the season, standing the hottest weather well, and makes a good quality of hay, though the yield for this purpose is not equal to some other varieties. Alone sow about 3 bu. to the acre, 14 lbs. to the bu. Per bu., \$2.50; per 100 lbs., \$14.00

RHODE ISLAND BENT GRASS (Agrostis Canina). Time of flowering, June and July. It is of a hardy, creeping habit, and good for close sward. For pasture sow about 3 bu., 12 lbs. to bu. Price per qt., 25 cents; per bu., \$3.00.

bu., \$3.00.

ward. For pasture sow about 3 bu., 12 lbs. to bu. Price per qt., 25 cents; per bu., \$3.00.

ORCHARD GRASS (Dactylis Glomerata). Flowers in June; height, about 3 feet. A widely known and valuable grass for pasture on account of its earliness and rapidity of growth, as it is ready for grazing several days before other grasses, and when mown produces a quick second growth. All kinds of stock, especially sheep, are very fond of it. It does well in nearly all soils, especially in moist, shady places; stands drought well, and keeping green and growing when other grasses stop. It makes a good mixture to sow with clover for hay, as they both blossom about same time; 14 lbs. to bu. Per qt., 25 cents; per bu., \$2.76; per 100 lbs., \$18.00.

MEADOW FESCUE (Fescuta Pratensis). Perennial; flowers in June and July; height, 18 to 24 inches. One of the best of our natural grasses—very valuable for permanent pasture, as it is highly nutritious and greedily eaten by all kinds of stock. It makes excellent hay, and does well in most any soil, though doing best in moist land. It is robust in habit, maturing early in the Spring, and continues green until late in the Fall, because it ripens its seeds before most other grasses are cut, and sheds them to spring up and cover the ground; 22 lbs. to bushel; sow about 2½ bushels to acre; 20cts. per lb.; per 100 lbs., \$18.00

MEADOW FOXTAIL (Alopecurus Pratensis). Perennial; flowers in May; height, 2 to 3 feet. This grass closely resembles Timothy, but flowers much earlier, and thrives in all soils except sand and gravel. It is valuable for pasture on account of its early and rapid growth, stands close cropping, and drought well, is relished by stock. About 7 lbs. to bu. Per. lb., 40 cents; per 100 lbs., \$35.00

and drought well, is relished by stock. About 7 lbs. to bu. Per. 10., 40 cents; per 100 lbs., \$35.00

TALL MEADOW OAT GRASS (Avena Elatior). Perennial, flowers from May to July; height, 2 to 4 feet. It produces an abundant supply of foliage, and is valuable for pasture on account of its early and luxuriant growth—also supplies an abundance of fodder after being mown. It grows well on sandy soil when once naturalized. Sow 4 to 5 bushels to the acre; 10 lbs. to the bu. Per lb., 25 cents; per 100 lbs., \$20.00.

CRESTED DOGSTAIL (Cynosurus Cristatus). Perennial; flowers in July; height, 1½ feet. A fine, short grass, valuable on hard, dry soils and hills, as it is hardy and but little affected by changes of weather. It is relished by stock when green, it being then tender and nutritious, but when ripened becomes tough and wirv. It is of close-growing habit, with dense, deep-green turf; 1½ bu. to acre; 21 ibs to bu.; 40 cts, per lb, per 100 lbs., \$35.00

KENTUCKY BLUE

CRESTED DOGSTAIL.

RED TOP.

ORCHARD GRASS.

ENGLISH RYE GRASS (Lolium Perenne). Perennial; flowers in June; height, 20 inches. It is a staple grass of Great Britian, and largely used in the composition of many of the meadow and pasture mixtures. Its natural adaptation to almost all cultivated soils, and its early maturity are the causes of its extensive use. It yields an abundant foli ge and is valuable as a hay crop when cut in blossom. About 2½ bu. to acre; 24 lbs. to bu.; 25 cts. per qt.; per bu., \$2.50;

ITALIAN RYE (Lolium Italium). Biennial; flowers in June and July; height, 2½ feet. One of the most valuable grasses in Europe, being suited to all climates and very valuable to use in mixtures for pastures in this country. It produces an abundance of nutritious feed early in the Spring, and continues through the season until late in the Fall. Not being a perennial it is unsuited for permanent pasture, but for temporary use it is unsurpassed. In the to but 3 by to acres 25. but for temporary use it is unsurpassed; 18 lbs. to bu.; 3 bu. to acre; 25 per qt.; per bu., \$2.50.

HARD FESCUE (Festuca Duriuscula). Perennial; flowers in June; height, 24 inches. Thrives well in a great variety of soils, one of the best grasses for general purposes, resisting drought well. It grows easily, and the foliage is of very good quality, and when cut makes superior hay. It stands heat and cold and does well in dry situations, where many other grasses would fail; 2½ bu. to acre; 12 lbs. to bu.; 25 cts. per lb.;

SHEEP FESCUE (Festuca Ovina). Perennial; flowers June and July; 10 to 15 inches high. Fine for upland and dry pastures. It is short and dense in growth, and of excellent quality, though small in quantity. Sheep are very fond of it; 2½ bu, to acre; 12 lbs. to bu; 25 cts. per lb.

SWEET VERNAL (Anthoxanthum Odoratum).
flowers May and June; height, 1½ to 2 feet. Very valuable on account of its fragrance imparted to grasses grown with it when dried for hay, which makes the stock relish it. It is early and continues quick growth after being cut through the season; 3 bu, to the acre; about 10 lbs to bu.; per lb., 25 cts.

AWNLESS BROME GRASS (Bromus inermis). A valuable forage plant for light, dry soil; answering for cutting and feeding in green state, for pasture or for hay; very productive stands heat and drouth well, sow 40 lbs to acre, 25c per lb.

TIMOTHY (Phleum Pratense). Also known as Herd's Grass. Perennial; flowers June and July; height, 3 feet and upwards. As a crop of hay, sown alone, Timothy is unsurpassed. On good, rich soil, it is very luxuriant, and attains a height of 4 to 5 feet, and even on poor soils it yields a fair crop. When cut soon after blossom it makes magnificent hay.

34 bu. to acre; 45 lbs. to bu.; 20 cts. per qt.; per bu.,

GOLDEN MILLET (Panicum Miliaceum). an improved variety, medium early, growing from 4 to 5 feet high. Is one of the best crops we have for cutting and feeding green, or for soiling purposes. Its yield is large when grown on good land. Its luxuriant leaves, juicy and tender, are much relished by stock. Heads closely condensed and spikes numerous. For hay it should be cut while in blossom otherwise it becomes tough and wiry; 48 lbs. to bu.; about \$2.00 per bu. \$2.00 per bu.

GERMAN MILLET, 48 lbs. to bu.

HUNGARIAN GRASS (Panicum Germanicum). annual forage plant, with smaller stalks and heads than millet, though very succulent and furnishes an abundance of green fooder. Often yields 2 to 3 tons of hay per acre. It will do well in light, dry soils, although the better the ground the better the crop; 50 lbs. to the bu. Price, \$1.50 per bu.

SOUTHERN COW PEAS.

The great soil renovator. The growing crop makes poor land rich and rich land better, at the same time producing a large amount of forage for green or dry feed.

A field of Cow Peas has been designated "The Poor Man's Bank," and a similar truth may be added, it will increase the rich man's bank

account.

The Southern Cow Pea (in reality a Bean), has been cultivated in the South for many years, but only in recent years has it been demonstrated that most all varieties are adapted to cultivation throughout nearly the entire United States. They now promise to become one of our most realizable form product.

valuable farm products.

Prof. Jared G. Smith, of the U. S. Department of Agriculture, says of their feeding value: The green vines are more succulent than Red Clover or any of the Grasses. The hay is more nutritious than hay produced from Grasses, Millets, or any other plant used for the purpose. One ton of Cow Pea Hay being equal to 1% tons of the best Timothy

The yield of hay runs from 1 to 3 tons per acre. The Rhode Island experiment station reporting one year a yield per acre of 35,000 pounds, green vines making 5% tons dry hay. The yield of Peas range from 13 to 30 bushels per acre, occasionally as high as 50 bushels;

As a fertilizer crop it excels all others, absorbing from the air more Nitrogen than Clover and drawing from the subsoil large amounts of Potash and Phosphoric Acid, depositing these fertilizer elements in the surface soil just where needed for succeeding crops.

Cow Peas afford excellent midsummer pasturage, but the best way for using green is to cut and feed to stock.

using green is to cut and feed to stock.

For hog pasture turn in just as the peas are ripening, hogs will then eat both vines and peas, and will put on fat rapidly.

For hay, cut when the last pods are formed, wilt, rake into winrows, leave one or two days, then put in small cocks a week or ten days till thoroughly cured.

Do not forget the Southern Cow Pea belongs to the Bean family and must not be planted until the ground is warm, in this latitude about May 10, to the last of June or even later if wanted for green feed.

Plow the ground deep and harrow well, sow broadcast 2 bu. per acre or drill 16 to 18 inches apart 1½ bu. per acre.

They will grow well on almost all soils not too wet.

Will quote prices promptly on application

Will quote prices promptly on application.

CLOVERS.

In ordering by mail, postage should be added at the rate of 8 cents per pound for every quarter pound and upward.

(Special prices on large lots.)

MEDIUM CLOVER (Trifolium Pratense). Perennial but of few years' duration. Price variable; 60 lbs. to bu.; 15 or 20 lbs. to acre; market price.

LARGE, MAMMOTH or PEA VINE CLOVER (Trifo-lium Pratense). Valuable on light ground and for plowing under; 15 to 20 lbs. to acre; 60 lbs. to bu.; market price.

ALSYKE CLOVER (Trifolium Hybridum). Perennial. Resembles in growth, etc., the Red Clover. Thrives well in cold, wet, stiff soils. The blossoms are very sweet; bees are very fond of them. It will produce very little crop the first year, as the roots have to get a firm hold of the soil. The second year it can be cut two or three times. The third year it comes into full vigor, and after that good crops can be cut for eight to ten years. About 12 lbs. to acre.. Per lb., 25 cts.

cut for eight to ten years. About 12 lbs. to acre.. Per lb., 25 cts.

ALFALFA or LUCERNE CLOVER (Medicago Sativa). This clover is one of the best forage plants (green or as hay) that a farmer can cultivate, being very nutritious for horses and cattle. No other green crop resists the drought better. It is no sooner mown than it pushes out fresh shoots. It will last for many years, shooting its tough and fibrous roots downwards to the depth of 10 to 20 feet below the surface till they are out of reach of drought. In the driest weather it will hold up its stems fresh and green when others droop for want of moisture, After it has become well set it can be cut three or four times in one season. It yelds enormously after the first year, 6 to 8 tons of dry hay being reported as an average yield. The thicker it is sown the finer and better the hay will be; 20 to 25 lbs. of seed should be sown on an acre. If sown too thin it will have large coarse stems and yield very poorly. Plow deep, cultivate the ground well and put on plenty of seed and you will have a good yield and a good quality of hay, 20 lbs. to acre. Per lb. 20 cts.; per bu., special price.

SCARLET or CRIMSON CLOVER (Trifolium Incarnatum). Annual; grows about 20 inches high and has very strong

natum). Annual; grows about 20 inches high and has very strong roots going deep into the soil. It will make a good growth on land too poor and sandy to grow red clover or any grasses and will make an enormous growth on good land. Does well in all places except wet land. Makes good hay or a fine soiling crop. Sow in Spring or Summer, about 15 lbs. per acre. Per lb., 18 cts.

BOKHARA CLOVER (Melilotus Alba). Valuable for soiling, grows from 2 to 3 feet high, and if sown in rich soil may be cut three times, and yields 3 tons and upwards per acre. Good for bees. About 10 lbs. to acre. Per lb., 25 cts.

DUTCH CLOVER (Trifolium Repens). WHITE Valuable in mixture for permanent pastures, forming, in conjunction with natural grasses, the finest and most nutritious food for cattle and sheep; also valuable for lawns and grass plats. Best imported. Per

JAPANESE BARNYARD MILLET, or BILLION DOLLAR GRASS. A very strong, luxuriant variety, growing 6 to 8 feet high, producing 10 to 12 tons per acre. Makes excellent fodder. Has produced 8,000 ibs. well-cured hay to the acre, from 3/4 bush. Per lb., 15 cts.; per 100 lbs., \$12.00.

SOJA BEANS. Valuable for fodder and a fine soil improver. Thrives in hot, dry weather. Per bushel, \$3.50.

KAFFIR CORN. Valuable for forage, land renovating, etc. Produces 2 to 4 heads from a single stalk. The whole stalk, if cut down as soon as seed heads appear, at once starts a second growth from the roots. It also stands drought wonderfully. If growth is checked for want of moisture, the plant waits for rain, and when it comes, at once resumes its growth. On very thin and worn-out lands it yields paying crops of grain or forage, even in dry seasons, when corn has utterly failed. The whole stalk, as well as blades, makes an excellent fodder, and all stock eat it greedily. Sow in rows 3 feet apart, ½ bu. per acre. Price on application. Price on application.

DWARF ESSEX RAPE. This plant is extensively grown for forage, especially for sheep, and for green manure, for which purpose there is perhaps no better plant adapted where a quick, rank growth is desired. Farmers who raise much stock and desire to get young cattle, sheep and lambs into favorable condition to be sold advantageously in the fall, can do it most cheaply by growing this Rape. Prepare the ground as for turnips and sow in June or July, with a turnip drill, in rows 2½ feet apart, at the rate of 5 lbs. of seed per acre, or broadcast at rate of 10 lbs. to the acre. Our stock is the true Essex Dwarf, and not the worthless annual. 15 cts. lb., 10 lbs. for \$1.00.

SORGHUM, or **SUGAR CANE**, is being used extensively as a green food for cattle, horses and mules; it is a sure crop, being a great drought resister and an immense yielder, proudcing many tons of most nutritious green food to the acre. Specially fine food for milch cows when pasture is short.

Early Orange. A strong grower; much more juicy than any other variety. The stalk is heavier and a little later than the Amber.

Early Amber. This popular and well-known variety is the earliest and makes the finest quality of both sugar and syrup. Price on

SPECIAL MIXTURE OF GRASSES.

FOR PERMANENT PASTURES, 14 lbs. to bu.; \$3.50 per bu

FOR TEMPORARY PASTURES, 14 1bs. to bu.; \$3.50 per bu.

FOR WET, LATE LAND, 14 lbs. to bu., \$3.00 per bu. FOR ORCHARDS AND SHADY PLACES, 14 lbs. to bu.; \$4.50 per bu.

Annuals, Siennials and Derennials,

— AND —

DIRECTIONS FOR THEIR USE.

Annuals are plants which, raised from seed, perfect the flowers, ripen their seed and perish the same season. There are some, such as Verbena, Eschscholtzia and others, cultivated as annuals, that are only such in a northern climate, being in their own congenial region biennials and perennials.

Biennials are those which grow the first season, flower the next, and then die. They may sometimes be induced to flower for two or three successive seasons, by preventing them from going to seed.

Perennials are those which live and continue to blossom several years. If planted very early in borders, or brought forward in windows or hot-beds, they will bloom the first season. Many of them are hardy enough to stand the coldest of our Winters, dying down every season, and coming up in the Spring from the old roots.

CULTURE.

Hardy Annuals, or most of them, may be sown out of doors in April or May, in the Middle and Eastern States, and some of the hardiest the last week in March, if the ground is in a condition to work, but the time for sowing seeds varies with the latitude. It is well to start some varities in pots or pans in the house, and transplant them when the weather permits, as a succession of bloom is thus obtained; those started out of doors coming on later. Any shallow pot or pan will do for starting seed, provided there is good drainage at the bottom, so that superfluous water can escape. Free access of air is very important, and this is interfered with by an excess of water in the soil. In planting out of doors, sow the seed evenly on borders of finely pulverized earth, leveled off, covering not over an eighth of an inch; press gently down with a board, shade from the sun, and water when necessary with a fine rose. When large enough transplant into a good mellow soil. [They will, if sown in August and September, grow sufficiently large to stand the Winter, but should be protected by a slight covering of litter or straw. Transplant in the Spring and they will produce very early flowers. Half-hardy kinds, being more tender, will not bear hard frost, and should not be sown in the open ground before the middle of May. Tender Annuals can hardly be brought to perfection without starting in the house or hot-bed. They can be started in March and April, in pans or pots of well-pulverized soil. Sow thinly, place in a gentle heat, and shade from the sun till well up, after which place near the glass, giving a little air on fine days; when strong, pick out in small pots, giving the same treatment as before till well established. Transplant when large enough and out of all danger of frost. Will do well if sown in open ground the first of June.

Biennials and Perennials may be sown in the Spring as early as annuals—they need the same treatment, and should be planted out the following Autumn in situations where they are to flower. Can only be sown in the Autumn, selecting as cool and damp a bed as possible, keeping the ground shaded and moist by frequent waterings until plants appear.

Green-house Seeds should be sown in pots or pans half full of drainage; cover this with rough siftings of mould, and the surface with fine soil, moisten, using a fine rose. Sow seeds evenly over the surface, cover very lightly, keeping from the rays of the sun until the plants show the third leaf, then transplant into seed pans three-fourths of an inch apart keeping them under a frame until perfectly recovered, giving a little air to strengthen them. As soon as they begin to touch each other, transplant into small pots and keep in a cool, airy part of the green-house near the glass, repotting them when necessary.

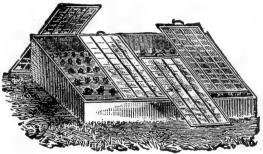

So11. The preparation of the soil, especially for sowing the smaller kinds of seeds, is of the greatest importance, the success or failure depending largely upon it. A mellow loam, which is a medium earth between the extremes of clay and sand, made rich with leaf mould, and thorough lyrotted manure, well mixed and made fine, form a light, friable soil, through which young plants can easily penetrate, and which will not

bake in the sun after watering. If the soil is heavy, add more leaf or sod mould, or manure in proportion; but always remember that the fertilizer must be well rotted, and, as well as the soil, thoroughly pulverized.

Sowing. Most seeds are planted too deep. From this cause they often fail to grow, and the seed is pronounced worthless. Great care should be taken in sowing. As a rule, cover only to the depth of the thickness of the seed, but plain, large seeds, like Sweet Peas, Morning Glories, Lupins, etc., one inch; Asters, Balsams, etc., one-half inch; Coxcombs or Celosias, etc., one-quarter inch. Place the finest seeds on the surface, having first pressed the earth down firmly, merely dust them over with a little earth and gently press down with a smooth board. In dry weather be sure to water every evening. When the plants first appear above ground, protect them from the direct rays of the sun.

In Planting, remember that soaking in warm (not hot) water will greatly hasten vegetation of Cypress Vine, Canna, and other hard shelled seeds, which are very slow to germinate. The ground should be kept free from weeds, and the earth should often be loosened, so that the plants may have the benefit of the rains and dews.

Hot-bed for Seedlings. In making a hot-bed the preparation of manure is a matter of importance, and it should be well worked previous to being used, if the bed be expected to retain its usefulness

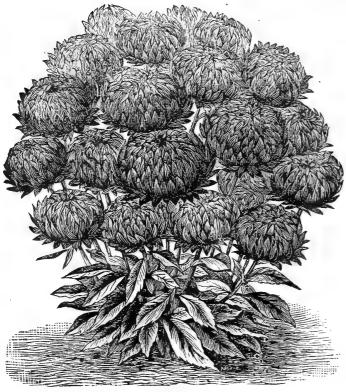

for any length of time. If obtained fresh, and found to be too dry, it should be well watered and thrown lightly together to ferment; this will take place in a few days, and from three to four days afterward it should be completely turned, shaken and mixed; a second turning may be required, although one is usually sufficient. When thus cleaned of rankness the bed can be made. The place should be chosen where it is dry underneath, sheltered from the north as much as possible, and fully exposed to the sun. It should be built up from two feet six inches to four feet high, and wider by six inches every way than the frame to be placed upon it. The manure should be well shaken and mixed while being put together, and firmly pressed by the feet. The frame should be placed on this and kept close until the heat rises, and three or four inches of sifted sand or light soil placed on the surface of the bed. In a few days it will be ready for use; but air should be given night and day while there is any danger from the rank steam. If the sand or soil are drawn away from the sides of the bed, they should be replaced. When the hot-bed is used for seed only, nothing further is necessary. Seeds should be sown in pots or pans, and plunged or placed in the bed. the heat of which will soon cause them to germinate; as this will after some time decline, a lining should be added, that is, fresh, hot, fermented, but not rank manure, applied about a foot in width all around the bed; this will renew its strength.

Cold Frames are formed by placing an ordinary hot-bed frame upon a bed of light, rich soil in some warm, sheltered place in the garden, where it will be protected from cold winds. They should both be shaded from the sun by mats during the middle of the day and covered at night.

In Watering, use water that has been long enough exposed to the air to have acquired its temperature, or some that has been correspondingly tempered by artificial means; distribute in the evening through a fine rose, for thus it will neither disturb the soil over the growing seed, nor injure the buds and expanding foliage of either the young or old plants.

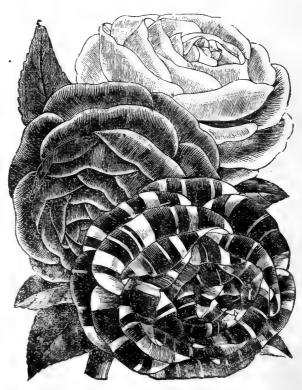

A (-) indicates a repetition of a variety; a (*) a climber.

ASTER PEONY-FLOWERED PERFECTION.

ABRONIA.	
A pretty trailing annual, bearing clusters of elegant Verbena- like flowers of great fragrance, remaining in bloom a long time; very effective in beds, rock-work or hanging baskets. Half- hardy annual.	pkt.

CALIFORNIA POPPY.

PHLOX PERENNIAL.

CHINESE PRIMROSE.

PHLOX STAR OF QUEDLINGBURG.

PANSY (Heartsease), Viola Tricolor.

A well-known favorite, producing a profusion of brilliant flowers. Picking off the buds as soon as they appear during the Summer will cause the plants to grow bushy and compact; they will bloom profusely during the late Autumn and early Spring months. Prefers a moist, shady situation; cover during the Winter months. Seed sown in August or September, kept in a cold frame through the Winter, and planted out in the Spring, will blossom the whole season. Hardy berennial.

Flowering Plants and Vines.

All Plants will be sent by Express. We do not send plants by mail, as we not only can send larger plants by express. but they arrive in a much better condition, as the soil does not have to be taken as clean from the roots, whereas in sending by mail the earth has to be almost entirely removed, the plants are small and it takes some time for them to revive, and they often perish. We can supply the latest and best varieties of the following plants, besides many other kinds.

Begonias, Cannas, Sarnations, Chrysanthemums, Coleus, Crotons,

Geraniums, Heliotropes, Palms,

Pansies, Petunias, Primrose,

Roses, for bedding, Roses, in collection, Tuberoses, potted,

Verbenas Violets, etc., etc.

Price of Flower Seeds by Weight.

By mail, post-paid at prices named, in not less quantities than one-half ounce.

Summer Flowering Bulbs.

GLADIOLUS are great favorites. They are of very easy culture and succeed well in sandy loam. If strong manures are used in the soil, it causes the colors of the flowers to run into each other, and gives them an indistinct appearance. They can be planted singly, in groups or in beds. Plant from 2 to 4 in. deep, according to size of bulb, and as they grow up, tie to a light stake about 21/3 ft. high. Should be taken up when frost has killed the leaves, dried ellar

n the sun, the stalks cut off an inch	from
the root. Keep them in a warm, dry	cellar
hrough the Winter.

TRY GLADIOLUS IN COLLECTIONS.

DWARF PEARL

TUBEROSE.

The most satisfactory of all the Summer blooming bulbs. Each bulb sends up a stalk about three feet high that throws from twenty to thirty flowers, and each flower may be said to be a bouquet in itself, so sweet and fragrant are they. They require a warm, rich soil, and a long season. Pot in February or March, and in the latter part of May transfer the plant into open ground. They can be planted in open ground as soon as danger of frost is over. When planted from the first to the middle of May, in a warm, sunny location, they should produce flowers early in July. Before potting remove all the off-shoots or little bulblets and the dry roots, which, if not done, is apt to prevent blooming.

TUBEROSES.

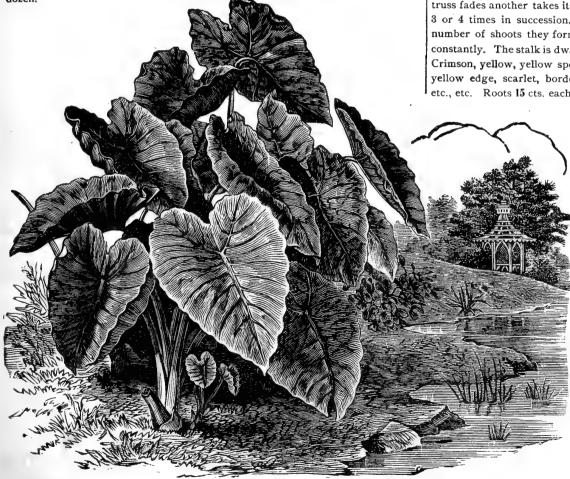

Ea. Pr. doz

VERY LARGE DOUBLE EX-CELSIOR PEARL TUBE-ROSE, flowers pearly white, larger and more on a stem than the common pearl; grows only twenty to twenty-four inches, about half the height of the old double sorts, the flowers are nearly twice the size (often two inches in diameter), and imbricated like a Camelia and very

Albino Tuberose—A very early single flowering variety, with very large and evenly filled spikes of pure waxey white flowers. They flower in July and throw from 2 to 5 flower stems from a single bulb, 5 and 8 cents each; 50 and 75 cents per dozen.

tracted much attention for the last few years. The large size and brilliant coloring of the flowers, and the freedom with which they bloom, make them most attractive for bedding plants. Every shoot blooms, and as often as a truss fades another takes its place, and each stem blooms 3 or 4 times in succession. As the plants throw up a number of shoots they form a mass of gorgeous bloom constantly. The stalk is dwarf, growing about 3 feet high. Crimson, yellow, yellow spotted crimson, cherry, salmon, yellow edge, scarlet, bordered yellow, orange, scarlet, etc., etc. Roots 15 cts. each; \$1.50 per dozen.

CALADIUM ESCULENTUM.

CALADIUM ESCULENTUM. A well-known tropical plant, growing to the height of 4 or 5 feet, with a corresponding breadth. The leaves are of immense size and of brilliant green, streaked with white, often measuring 2 feet in length by 1½ feet in width; very showy, fine for lawn, door yards, etc.; bulbs, 25 and 50 cts. each, according to size.

CANNA EHEMANI. Resembles Musa or banana. 20 cts. each.

CANNA ROBUSTA. This variety has a broad variegated leaf, growing well in good soil; fine for ornamental purposes, 12 feet high. Eulbs 20 to 50 cents each.

CANNA. Mixed sorts; 10 to 15 cts. each.

LILLY OF THE VALLEY. A well-known perennial, blooming early in the Spring. Foliage rich green, flower stalks graceful and slender, covered with pure white, bell-shaped flowers of the greatest fragrance and beauty. Clumps, 25 and 50 cents; by mail 20 cts. extra.

AMARYLLIS FOR-MOSISSIMA, or JA-COBEAN LILY.

These bulbs produce flowers of a rich violet hue and beautiful appearance. Each 15 ets.; per doz. \$1.50,

SINGLE DAHLIAS.

DOUBLE DAHLIAS are well worthy of culture. The variety and beauty of its blossoms, and profusion in the late Summer and Autumn, when there are few handsome flowers in bloom, make it a great favorite. It will grow well in almost any good soil, except wet, heavy clay. Set about 3 feet apart; when out of danger of frost allow only one shoot to grow; tie to stakes as it advances, trimming off the lower

side shoots, keeping it moderately wet in dry weather. The tubers should be taken up before the ground freezes, and laid away in a dry, warm cellar till Spring. Bright Claret, White, Crimson, Red, Amber, Rose, Yellow, Salmon, Variegated, etc., etc., 20 cents each; \$2.00 per doz.

Dwarf Bouquet Dahlias, assorted colors, 20 cents each; \$2.00 per doz. White, 20 cents each; \$2.00 per doz.

LILY OF THE VALLEY. MADEIRA VINE.

SINGLE DAHLIAS. This section of the Dahlia family has now become exceedingly fashionable, on account of the value attached to the cut blossoms. The flowers range from 3 to 5 inches in diameter, with a bright yellow center, surrounded with petals of all shades of scarlet crimson, rose, yellow, orange, white; 20 cents each; \$2.00 per doz.

DOUBLE TUBEROSE.

NYMPEA (Water Lily.) These lilies are beautiful, and until lately have been rarely cultivated. They can be grown in any lake, pond or swampy piece of ground, aquarium, tanks or tubs of water sunk in the ground. The flowers are from 6 to 8 inches in diameter, very fragrant, and are produced freely from June to September. For growing in ponds, if a soft, muddy bottom, tie the roots close to a stone large enough to sink it, and drop it near the shore in 2 or 3 feet of water. If a hard bottom, dig a small hole and cover it lightly. For tubs put in 6 or 8 inches of light loam or pond mud, if handy; lay in the roots, being

inches of light loam or pond mud, if handy; lay in the roots, being careful to straighten out the fibres, and cover 2 inches deep; fill the tub gently with water and keep full. These tubs should be put in a cellar in the Winter, to keep from freezing; fill with water when put away, and they will come out all right in the Spring. On obtaining the roots, if you are not ready to plant them, put them into a dish of water and they will keep for several days. Good roots, 25 cts. each; \$2.00 per doz. each; \$2.00 per doz.

PEONIES. The Peony is perfectly hardy, and succeeds in any ground that does not lie under water during Winter. Double White, Double Rose, Double Sweet Scented. Roots, blossoms. 20 cents each; \$2.00 per doz.

20 cts. each; \$2.00 per doz. Gloxinia Bulbs, mixed varieties, 25 cts. each; \$2.00 per doz.

MADEIRA or MEXICAN VINE, Large bulbs, 10 cents each; \$1.00 per doz. Good bulbs, 5 cents each; 50 cents per doz.

NEW TUBEROUS-ROOTED BEGONIA. (Laing's unrivaled strain.) These are bound to become most popular for open-air

bedding. As they become better known, they will be grown everywhere. From the time the first bloom appears until all growth is stopped by frost, they are never out of bloom, and are covered with great wavy flowers from 3 to 5 inches across — borne in such profusion that the rich, glossy, green foliage is almost hid. den under the blossom. They surpass in gorgeousness and beauty any of the bedding plants. They produce many colors varying through all the shades of crimson, scarlet, orange, yellow and white. They are not grown to the extent they should be, as they require no more care than Geraniums, and have as require no more care than Geraniums, and have as fine a range of color, and will bloom continually, even where Geraniums droop through lack of moisture. Planted in Rockeries, Flower-beds or Borders, they rival the Geranium with their rich and varied colors. The bulbs succeed well in any good soil, and will do well in a shady situation. The bulbs should be taken up in the Fall and laid away until Spring in a dry, cool place.

Single-flowered bulbs of scarlet, yellow, white and crimson, 15 cents each; \$1.50 per doz. Double-flowered bulbs, 20 cents each; \$2.00 per doz.

JAPAN LILY. These beautiful lilies in shape somewhat resemble the old-fashioned Tiger Lily, but far surpass it in beauty of coloring. They grow well in any good soil, but if planted in a rich loam they will flower much more profusely. When in flower they should be well watered, especially in dry

weather. Manure should be avoided, as it is injurious. If protected with a covering of straw or leaves they can be left in the ground throughout the Winter. They should be started in pots, and about the last of April or first of May set out where they are intended to bloom, 6 inches deep, or in the open ground the last of May.

Lilium Auratum (Golden Japan Lily). White Ivory ground, with purple points or

Strawberry plants at dozen rates mailed without extra charge; at 100 rates for 50 cents extra per hundred.

POTTED STRAWBERRY PLANTS.

The most favorable time for transplanting Strawberries is during the Spring months. A bed planted in April or May, and well cared for during the Summer, will produce a full crop the following season. When it is not practicable to set out in the Spring, a full crop may be obtained the next season by planting pot-grown plants during August or September. These have been layered in pots, and taken out and transplanted with the entire ball and every root the plant has made. After August first, we can furnish pot-grown plants of most of the above varieties at \$2.00 to \$2.50 per fifty; \$3.50 to \$5.00 per hundred. Pot-grown plants cannot be sent by mail.

Also many other kind of Plows, from \$4.00 to \$14.00.

Implements and Insecticides for Spraying.

Spraying is no longer an experiment; it is an accepted practice, as | tillage, pruning and fertilizing are, if we desire to grow nice fruit, shrubs and trees. Therefore let us pattern after the bugs and be ready before the busy season comes, - have the pumps in working order and our insecticides in stock. Spraying is an insurance, a protection to our trees. Do we not pay out many dollars to insure our buildings, which can be replaced with new ones in less than one year? Then why not insure our trees, which take a lifetime to grow? Be prompt, THOROUGH and persistent. Knowledge and good judgment are more necessary to success than any definite rule. Apply the right remedy at the right time and do your work well. Spray, not sprinkle, until all the leaves are moistened (if possible) and until the solution begins to drip from the trees.

WHEN TO SPRAY .- The time of making the application varies with the season. As a rule when the insects first appear, or if the orchard fruits; for the more common insects, just before the fruit-buds open and just after the blossoms fall. Never spray a tree when in blessom.

The foregoing leads to the remark that the man who sprays must think for himself, and so he must if he will be successful in any undertaking. With the special pumps and prepared insecticides now on the market the labor of successfully combating nearly all injurious insects is much reduced to what it was when our fathers used green paint applied with a hearth-broom as a cure-all. Science has now perfected insecticides, which do not wash off when thoroughly dried on the leaves, which is a boon to the fruit grower. Among these we find Aiboneta, one of the very best. This insecticide is growing in popularity each year and is now used exclusively in many of the largest parks in the country. For plant lice and soft-bodied sucking insects, we have a specially prepared soap. For scab and blight, Fresno is most effective. We carry in stock the very best and most complete line of insecticides. Our stock of fungicides, spray pumps, hose and nozzles, is most complete. Protect your shrubs, plants and trees from disease and insect attacks. Full directions accompany all goods sold by us.

DISPARENE—Safer than Paris Green. Kills insects, does not burn the leaves, and adheres throughout the season. Can be safely used on the most delicate foliage. 2 lb. can, 75c., 5 lb. pail, \$1 50.

FRENCH BORDEAUX MIXTURE-1 qt. jars, 50c.

SLUG SHOT is an infallible insecticide. It is an impalpable powder, a combination of insecticides poisonous to insects preying upon regetation and withal an excellent fertilizer, affecting nearly all classes of insect life, so that they either die or leave for parts unknown. Slug Shot has been used since 1880 in thousands of gardens and upon ciuy snot has been used since 1880 in thousands of gardens and upon acres of field crops with conceded effectiveness upon Slugs, Worms, Caterpillars, Aphides, etc. It is in use in greater or less degree in every State in the Union, and each Canadian province, Egypt and New Zealand.

b lb. packages.....

WHALE OIL SOAP - For the destruction of insects on plants. Per box, 10 and 15 cts.

FIR TREE OIL SOAP - For destroying Lice, Red Spider, Mealy Bugs - by dissolving and spraying plants or Greenhouse. In using, dilute box in 10 gallons of water. Per box. 25 cts.

THRIP JUICE — Especially prepared for house and conservatory use and for out of doors. It is non-poisonous. Dilute with 20 to 40 parts water, according to the strength of the plants, when using. Pints, 40 cts.; quarts, 75 cts.

SPRAYALL - For spraying Plants, Bushes, etc. 25 cts. bottle. PARIS GREEN — Indispensable on farm or garden for pre venting ravages of Potato Bugs, etc. In applying dry, use 1 lb. to 100 lhs. plaster or flour. In water, 1 lb. to 200 or 300 gallons. TOBACCO DUST - 5 cts. per lb.; 4 cts. per lb by the bbl.

Bug Death, Etc.

COW~EASE-A preparation to prevent Flies from troubling Cattle or Horses. Gal. can., 80 cts.

The Simplex Barrel Spray Pump

WITH MECHANICAL AGITATOR AND BRASS WORKING PARTS.

THE POPULAR ORCHARD SPRAYER.

It is estimated by the highest scientific authorities that the annual Loss in Crops from injury by insects and fungi amounts to about \$500-000,000 and that 75 per cent. of the amount, or \$375,000,000, can be saved by spraying the trees.

Not only is the fruit injured, but the trees will, if not sprayed in two or three years, gradually die from the insects, which weaken them so

they will perish. It is therefore a NECESSITY to SPRAY, not only to preserve the fruit, but the TREES themselves.

Proper Spraying Apparatus are very necessary to every Fruit Grower and, if a little care is taken of them, they will last for years and pay for themselves many times over. The one great thing which is absolutely necessary for Orchard work is an efficient agitator, without this, not only do the valves and nozzles be come clogged, but the poison settles at the bottom of the barrel. This causes an uneven application of the liquid, it being too strong at the beginning, which will be apt to damage the foliage, and at the close so weak it will be worthless, like spraying with clear water. Our

New Automatic Agitator keeps the water in a perfect boil by the working of the agitators. It is impossible for the poison to settle, but it is thoroughly mixed with the water, which is churned into a froth as soon as you commence pumping. This AGITATOR is the only one made which will do the work perfectly. All other pumps have agitators which move one way only, or a hose that returns a stream into the barrel. This agitates in one spot, which is useless in the application of poisons, which will always settle at bottom of the barrel if the water is not churned and kept in a perfect tumult to agitate the solution where it most needs it-at the bottom and around the suction strainer. These pumps have the only PERFECT AGI-TATOR in the world which is mechanical, operated by the motion of the handle. This pump can be easily placed on an oil or whiskey barrel, as it has an adjustable attachment to fit top or side of any barrel. The air chamber is large and insures a constant stream, which will continue some time after you stop pumping. It is very easily worked and durable, as the working parts are made of BRASS, cylinder BRASS LINED, piston rod BRASS CASED and plunger and valves are SOLID BRASS. It is arranged so it can be used with one or two streams at the same time, spraying two rows at once, or one side each

Pump, as shown in cut, with Y connections, 121/2 feet of 1/2 in. hose, Bordeaux nozzle and pole connections (without barrel)

THE CENTURY SPRAYER—With submerged BRASS Cylinder, Brass Ball Valves and everlasting plunger packing. For durability, ease of operation, free water ways and positive action, this pump STANDS UNRIVALLED. It has the NEW AUTOMATIC AGITATOR, air chamber is LARGE with 2½ inch Cylinder, 5 inch stroke, with Y connections for two leads of hose.

PLANET DOUBLE-ACTING SPRAY PUMP..... 60 00 BUCKET PRIZE SPRAY PUMP, with Brass working parts, bronze ball valves, malleable foot rest, throws stream or spray.

HAVEN'S CLIMAX CONDITION POWDER.

A positive Preventive and Cure for Gapes and Poultry Cholera, Heaves, Worms, &c., in Horses. It is the best medicine for Horses, Cattle, Poultry, Sheep and Hogs

For Using Paris Green Pure. A Wonderful Invention. Light, Swift, Easy, Safe, Strong and Cheap.

For Orchard, Vineyard, Garden or Potato Field. Distributes Paris Green or any Dry Powder. Thousands in use.

For destroying Curculio, Codling Moth, Canker Worm, Pear Slug, Cabbage Worm, Cut Worm, all leaf-eating Caterpillars, etc., on Potatoes, Apple, Pear, Plum, Cherry, and Peach Trees. With it a man can thoroughly Paris Green from one to two acres of Potatoes in one hour, using 1 lb. of Green to the acre. When used only on one acre it will save its cost the first year. No other machine renders the handling of Paris Green so free from danger. Price, \$7.50.

ACME ASPARAGUS BUNCHER, a greatly improved pattern, with adjustable knife guide and movable head, with automatic catch for binding any size bunch. Price, \$2.50.

THE "SUCCESS"

GARDEN AND SPRAY PUMP.

All Brass Working Parts. With Indestructible Bronze Valves. Malleable Iron Foot-Rest.

(Showing position of foot-rest and manner of placing pump in bucket.)

This new and excellent Pump is used for Spraying in gardens, vineyards, greenhouses, orchards, and for washing windows and buggies; also for spraying poultry houses. THE WORKING PARTS ARE ALL BRASS, and bucket foot-rest is made of malleable iron. Nothing could be simpler and more durable than this Pump. It has large air-chamber space and is doubleacting, throwing an absolutely continuous stream, either solid or in fine spray. The end of hose connecting to Pump is coiled with brass spring wire, adding largely to its durability. This Pump is rightly named, and as a leader for general use it cannot be beaten. The "Bordeau" Nozzle, the best combination Spraying Nozzle on earth, is furnished with "Success" Pumps. This nozzle throws a solid stream, fine or double spray (adjustable), and is easily degorged, or may be shut off altogether-features possessed by no other Spray Nozzle. Price, \$4.50. Additional length of Hose and Holder for spraying trees, \$1.25.

GARDENERS. Many men apply to us for situations as gardeners, and many persons ask us if we can get gardeners for them. For the benefit or these two classes we wish to say that when a man applies for a situation we ask his name, address, age, nationality, whether he is married or single, whether he has children, their ages, and obtain all the information we think essential. The cases are very rare in which we recommend a gardener to an employer. The most we can do is to give his references and let the employer find out about him for himself. The labor is entirely gratuitous on our part, so we cannot take any responsibility. We do not however, enter on our books the name of any gardener whom we have reason to believe to be an undesirable man.
